EDUCATION

2021 - 2023

**SNS COLLEGE OF TECHNOLOGY -
COIMBATORE, TAMIL NADU**

- Master of Computer Application (MCA)
- GPA - 8.01

2015 - 2018

BRIJ UNIVERSITY

- Bachelor of Science (B.Sc)
- GPA: 6.12

SKILLS

- Python
- Deep Learning
- Machine Learning
- NLP
- LLMs
- Computer Vision
- Project Management
- Teamwork
- Leadership

LANGUAGES

- English (Fluent)
- Hindi (Native)
- Tamil (Basics)

PROFILE

Data Science Engineer with 3 years of experience in developing and deploying data-driven solutions. Proficient in data analysis, machine learning, and statistical modeling, with hands-on expertise in Python, NLP and Deep learning. Experienced in leveraging data visualization tools like Jupyter-notebook and Google colab to communicate insights effectively. Strong background in collaborating with cross - functional teams to drive data strategy and optimize processes. Committed to continuous learning and staying updated with industry trends to enhance analytical capabilities.

WORK EXPERIENCE

Ambient Scientific
Data Scientist

2023 - PRESENT

- Developed and implemented predictive models and machine learning algorithms to drive business insights and enhance decision-making processes, achieving a confusion Metrix, testing accuracy, validation accuracy.
- Conducted data collecting, cleaning, augment, preprocessing, feature extracting and exploratory data analysis on large datasets using Python and improving data quality and reliability for analysis.
- Participated in model deployment and monitoring, ensuring robust performance and continuous improvement of deep learning models (CNN, RNN, LSTL, GRU, ANN) in production environments.

Neelavath Software Solution (ML Engineer)

2022 - 2023

- Developed an efficient wake word detection system to enable voice-activated functionalities in smart devices.
- Developed a speech recognition system capable of detecting multiple command words from audio input, enhancing user interaction in smart home devices.

KEY PROJECTS

- **Alexa Wake Word Detection:** Built a GRU-based model (~5K parameters) with MFCC preprocessing for low-latency keyword spotting.
- **Neura Wake Word Detection:** Developed CNN model with minimal parameters for always-on wake-word recognition using MFCCs.
- **Multi-Command Word Recognition:** Implemented Conv1D and Conv2D models to classify commands like "casino", "dad", etc., using MFCCs and low-resource architectures.
- **Face ID Recognition:** Created a CNN-based face recognition system (~14K parameters) using OpenCV and real-time video input.
- **Fall Detection (IMU Sensors):** Engineered 20 time-domain features from accelerometer ($\pm 2G$) and gyroscope (16G) for accurate fall detection.
- **HAR (Human Activity Recognition):** Developed a motion classification model using 8 statistical features (magnitude, median, range, jerk, SMA) from IMU data.
